21st Century Life for Young  
Adults and the Impact on  
Charitable Behaviors

SCHOOL OF  
PUBLIC POLICY

DO GOOD INSTITUTE

October 2019

## Appendix

### Detailed Tables of Annual Data

This Appendix contains data tables that are used in the research brief “Shifting Milestones, Fewer Donors and Volunteers: 21st Century Life for Young Adults and the Impact on Charitable Behaviors.” The tables display year-by-year changes in demographic statistics, volunteer rates, and giving rates.

All tables have a format similar to Table A-1 (“All Adults (ages 16 and over) – Giving and Volunteering”). Table A-1 contains annual data, taken from the CPS September Supplements, on volunteering (from 2002 through 2015) and giving (from 2008, the year the question was added to the CPS Volunteer Supplement, through 2015) for the entire adult population (defined as ages 16 and over). The “Rate” column on the left of the table contains estimated volunteer rates for the entire adult population, where the 2002–2015 Current Population Survey (CPS) Volunteer Supplements are the data source for these estimates. The “Lower CI” and “Upper CI” columns contain the lower and upper endpoints of the 95 percent confidence interval around each estimated volunteer rate.<sup>1</sup>

The rightmost column in each table (“Y-t-Y Difference”) indicates whether the current year’s percentage is significantly different from that of the previous year. If the observed change from the previous year was statistically significant, we use “+” and “-” symbols to describe the change as positive or negative; we use “NS” to denote changes that were not statistically significant. In some cases, the year-to-year differences indicate that a change is statistically significant, even though the confidence intervals overlap. This occurs because the 50% overlap between CPS samples adds statistical power to estimates of year-to-year changes; the overlap induces correlation that reduces the size of the confidence intervals around the estimated differences.<sup>2</sup>

The cell in the lower right corner of each table shows whether the observed long-term change was statistically significant, and if so, whether it was positive or negative. In the table of volunteer rates for all adults (Table A-1), we compare volunteer rates in 2005 and 2015 to assess the long-term change in volunteer rates, and find that the national adult volunteer rate has decreased significantly during that time period. The 2005–2015 comparison is also used to assess changes in demographic characteristics. To measure long-term changes in giving rates, which were not available in the CPS until 2008, we compare giving rates in 2009 and 2015.

Table A-2 is similar to Table A-1, but displays trends in volunteering and giving among young adults (ages 22–35) during the period for which data are available. Table A-3 contains annual data on the proportion of all adults and the proportion of young adults (ages 22–35) who have not graduated from high school and who have graduated from college. Table A-3 shows that the proportion of young adults with college degrees has increased significantly from 2005 to 2015, and the proportion of young adults without a high school diploma decreased significantly over the same time period.

Table A-4 contains trend data on giving and volunteering for young adults who are college graduates (top) and who have not graduated from high school (bottom). In each set of tables, the cells in the lower right column indicate that, for college graduates, the volunteer rate declined significantly between 2005 and 2015, and the giving rate also declined significantly between 2009 to 2015. Neither the volunteer rate nor the giving rate changed significantly during these time periods for young adults without a high-school diploma (or the equivalent).

<sup>1</sup> Confidence intervals are calculated using the generalized variance function parameters described in the Source and Accuracy sections of the documentation for the CPS Volunteer Supplements. Please see Attachment 16 of the September 2015 documentation package (available at <https://www2.census.gov/programs-surveys/cps/techdocs/cpssept15.pdf>) for details.

<sup>2</sup> See the Census publication “Source and Accuracy of Estimates for Income and Poverty in the United States: 2016 and Health Insurance Coverage in the United States: 2016” (available at <https://www2.census.gov/library/publications/2017/demo/p60-259sa.pdf>) for details about these formulas.

**Table A-1: All Adults (ages 16 and over) - Giving and Volunteering**
